

WINTER

Winter is more than a season. Winter is also a time to choose outdoor activities. Snowmobiling, alpine skiing, snowboarding and even the occasional hike through the forest - there's always time for your favourite activity. To get the most out of it, be protected and achieve great results, all you need to do is choose the right clothing.

Dragonfly offers everything you need for any type of activity. The key is the practical all-in-one approach: you can find both an outfit you can wear, and matching thermal underwear. You can easily find clothing for every member of your family if you have a family holiday: we have women's, men's, children's, snowmobiling, skiing, casual, thermal underwear and much more. The Dragonfly experts know what to recommend for a real winter.

At any point in your adventure holiday it's important to be in the right gear.

Dragonfly, a Ekaterinburg based company, has been making equipment for outdoor enthusiasts and fresh air lovers since 2011. Our winter range includes clothing for snowmobiling, snow biking, alpine skiing and snowboarding. Our goal is to create functional, beautiful and high-quality garments to help you enjoy winter hobbies and achieve new heights and victories in professional sports.

Unforgettable adventures await you in Dragonfly clothing.

LAYER'S SYSTEM

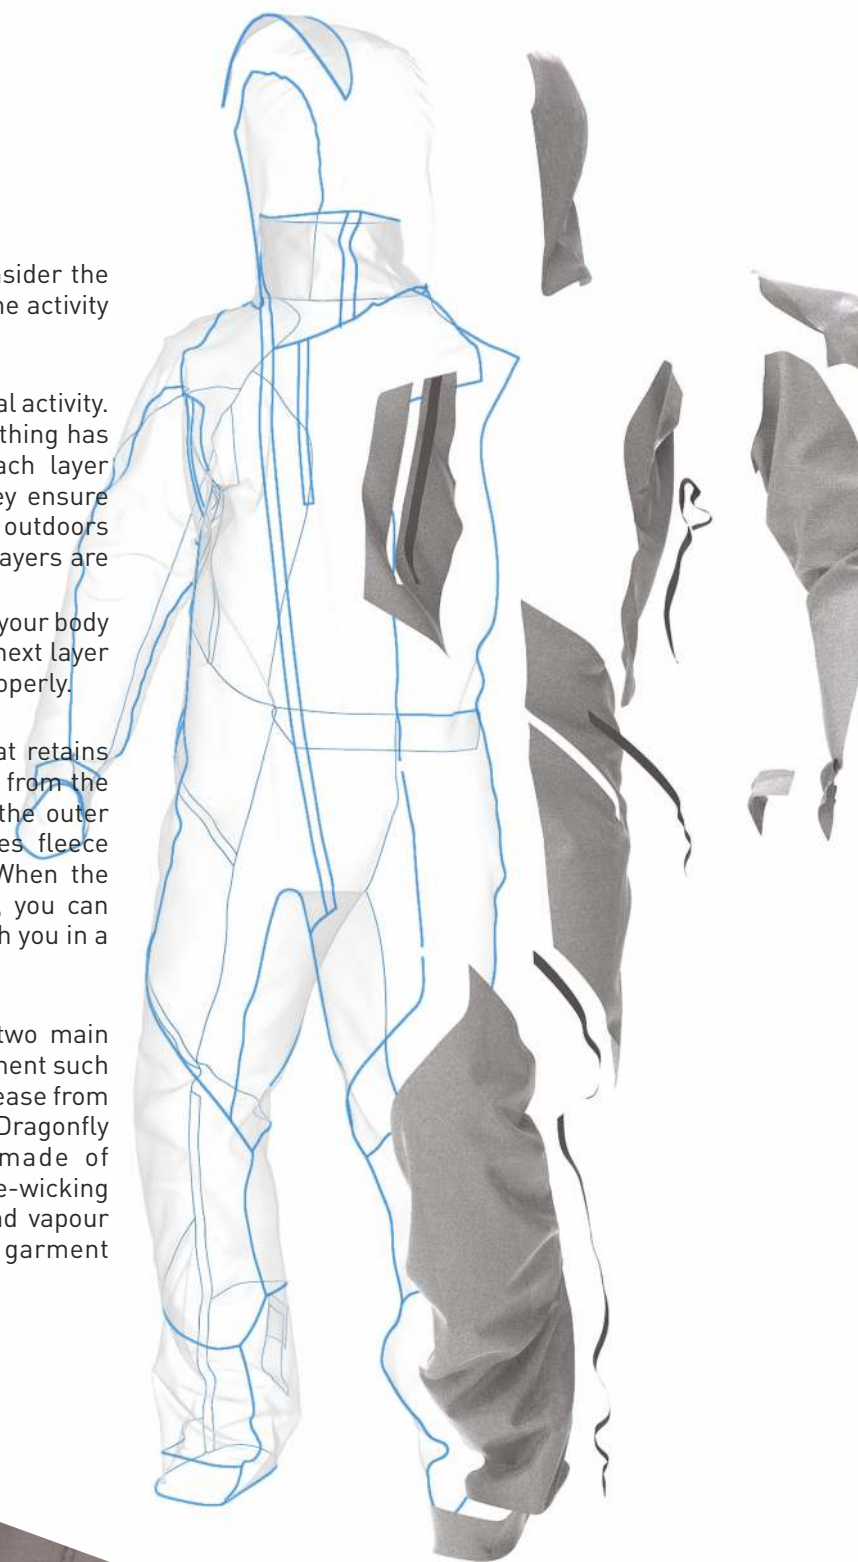

When picking out clothing, you should first consider the weather conditions, the weather forecast and the activity format.

When outdoors, there is often a change in physical activity. To prevent overheating and overcooling, the clothing has been designed with a three-layer system, each layer performs a different function and together they ensure comfort throughout the entire time - from going outdoors to returning to a warm environment. All three layers are available in the Dragonfly outfit range.

The base layer is thermal underwear that keeps your body warm and dry by wicking moisture away to the next layer and ensuring that the subsequent layers work properly.

The thermal layer is a breathable garment that retains heat coming from the body and takes moisture from the thermal underwear, transporting it further to the outer layer. Dragonfly winter clothing range includes fleece jackets, waistcoats, bib-overalls and shorts. When the weather is warm or you are physically active, you can choose to skip the outer layer on and take it with you in a backpack or carrier bag.

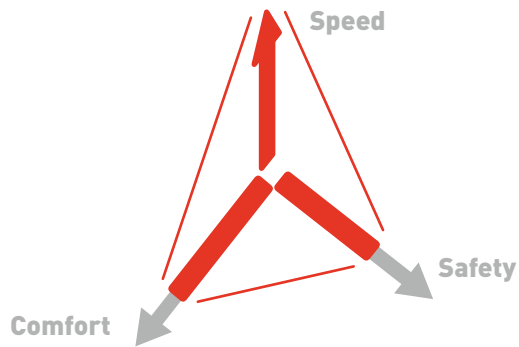

The protective layer is outerwear which has two main functions: protection from the external environment such as snow, rain or wind, and the final moisture release from the body to the outside in a vapour-free state. All Dragonfly outerwear: monosuits, suits, coats are made of membrane fabric with an additional moisture-wicking coating. The membrane properties of water and vapour permeability are selected according to the garment purpose.

SUPERLIGHT

project

The Superlight is an innovative unlined overall made of a triple-layer Dermizax membrane. The new season item. The long process of design, material testing and multi-stage testing by professional riders, including modifications and improvements has been completed and Dragonfly is proud to present the super light, super durable monosuits for professional downhill snowmobiling, skiing and snowboarding.

The Superlight, a ground-breaking product from Dragonfly, is designed and manufactured using premium materials and the latest equipment: laser cutting, part gluing, seamless technology.

The Superlight monosuits are the first step in the expansion of the Dragonfly professional outerwear range, featuring minimal weight and increased durability.

SUPERLIGHT

monosuit Yellow-Black

Unlined monosuits for active off-piste skiing. Features and materials selected to withstand extreme conditions.

Maximum active ventilation is in the underarm area and pant legs.

Zip for unzipping the trousers from waist to bottom. 6 pockets including one for a ski pass.

Adjustable braces allow for a comfortable fit when the top is removed.

Adjustable hood with three drawstrings and a rigid visor, detachable with zipping.

Adjustable waist with an elastic band.

Snow guards with elastic band loop.

Reinforcements made of thick 3-layer membrane in high impact areas.

Biflex sleeve cuffs.

Tongue and sleeve loops.

D-ring.

SNOWMOBILING

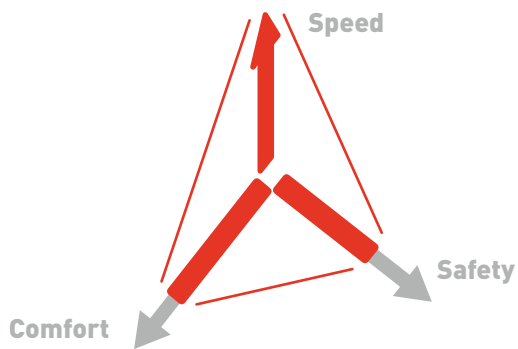

equipment

Dragonfly is the pioneer of snowmobiling overalls in Russia. We were the first to step into this new niche for our country and today our line-up includes over 30 models of clothing and accessories.

When designing and sewing our clothes, we use modern materials and accessories of increased resistance, wearing Dragonfly you won't be afraid of Russian frosts and temperature fluctuations. Before a new model goes into production, it is always "tested" by professional riders from Russia, Canada and America. special attention is paid to design - Dragonfly outfits are created following sports trends so that the rider looks stylish and trendy in all conditions.

The requirements for snowmobiling outfits, although tastes vary, are quite similar: they must be light but still warm; not restrictive of movement yet combine the necessary accessories and protective gear. Dragonfly takes all these criteria into account and places great importance on the recommendations of test riders, professional instructors and customers. Dragonfly mountain snowmobile monosuits are the best value for money available today in terms of high quality and affordability.

EXTREME 2.0

The Extreme series monosuits have been in production for four years. They made Dragonfly a popular brand in the snowmobiling segment. Over this time, the monosuits have become a quality guarantee, their functionality has been maximised, largely thanks to feedback from Russian and Canadian snowmobilers.

The Extreme 2.0 was a new evolutionary step in snowmobiling monosuits. We left the best of the Extreme version and started using new and improved fabrics and membrane reinforcements, which made the monosuits lighter while maintaining their strength and durability. A new fit and straight centre zip changes the ergonomics and makes the overalls slimmer to the body.

Especially for snow bikers, we have made two monosuits colours, which are available with leather inserts at the bottom of the trousers.

EXTREME 2.0

insulated monosuit MAN Camo-Black

The Extreme 2.0 monosuits with thermal insulation and built-in knee protection, for utility snowmobiling, winter quad biking and hiking in low temperatures and deep snow.

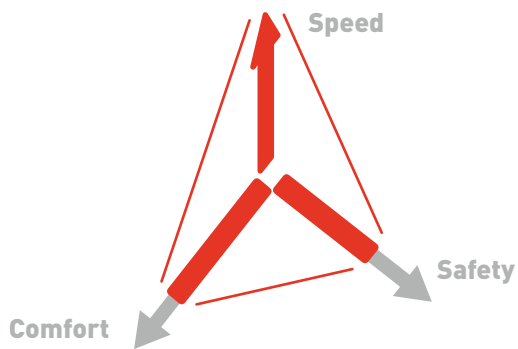

The monosuits use a durable reinforced membrane fabric and the modern SLAYTEX PREMIUM sports insulation is made of

microfibrils with silicone coating, which does not absorb water and retains thermal insulation properties in high humidity conditions.

The monosuits are airtight with sealed vents and pockets. The functionality of the monosuits is comfortable for long rides. The monosuits have garnered a lot of positive feedback from snowmobilers for 2020.

EXTREME

woman

The Extreme women's monosuits are characterised by a maximum aesthetic fit. The slim fit and comfortable ergonomics make it look great on the body, while still being comfortable to ride and perform sports elements in. Particular attention has been paid to style - elegant, noticeable but not flashy. The reliability and sustainability of the materials used are a guarantee of quality and comfort.

The Extreme women's snowmobile monosuits were designed jointly with experienced Russian female snowmobilers. The functionality and materials of the suit allow it to be used for professional riding and competitions.

EXTREME

insulated monosuit WOMAN Red-Yellow

Women's snowmobiling monosuits suit for snowmobiling, snow biking and freeride riding. The slim fit and shape are kept as elegant as possible while adding a modern, sports insulation that retains its shape over time. The monosuits have been tested for comfort and functionality and the addition of thermal insulation has been positively assessed, while the monosuits remain stylish and elegant. The modification of the monosuits has significantly increased the level of comfort during winter activities.

Once again, the snowmobilers made their contribution, along with the snow bike enthusiasts. The monosuits features and materials make it the perfect choice for professional riding and competing in lower temperatures. 3-layer membrane fabric

EXPEDITION

The Expedition suit has been designed in collaboration with the team undertaking long snowmobile expeditions. It has been tested in such expeditions and further refined for this season. The Expedition is the warmest suit in the Dragonfly collection for snowmobiling, the result of our experience in designing clothing for extreme conditions and using materials that perform reliably in such conditions. The SLAYTEX 300g/m² insulation features a unique heat-transfer system that allows the body to breathe even under intensive loads. The suit features reliable and durable materials, additional built-in protection, a large number of pockets and the option to strap the jacket to the trousers for easy use in heavily snow-covered terrain.

6 pockets, safety D-ring.

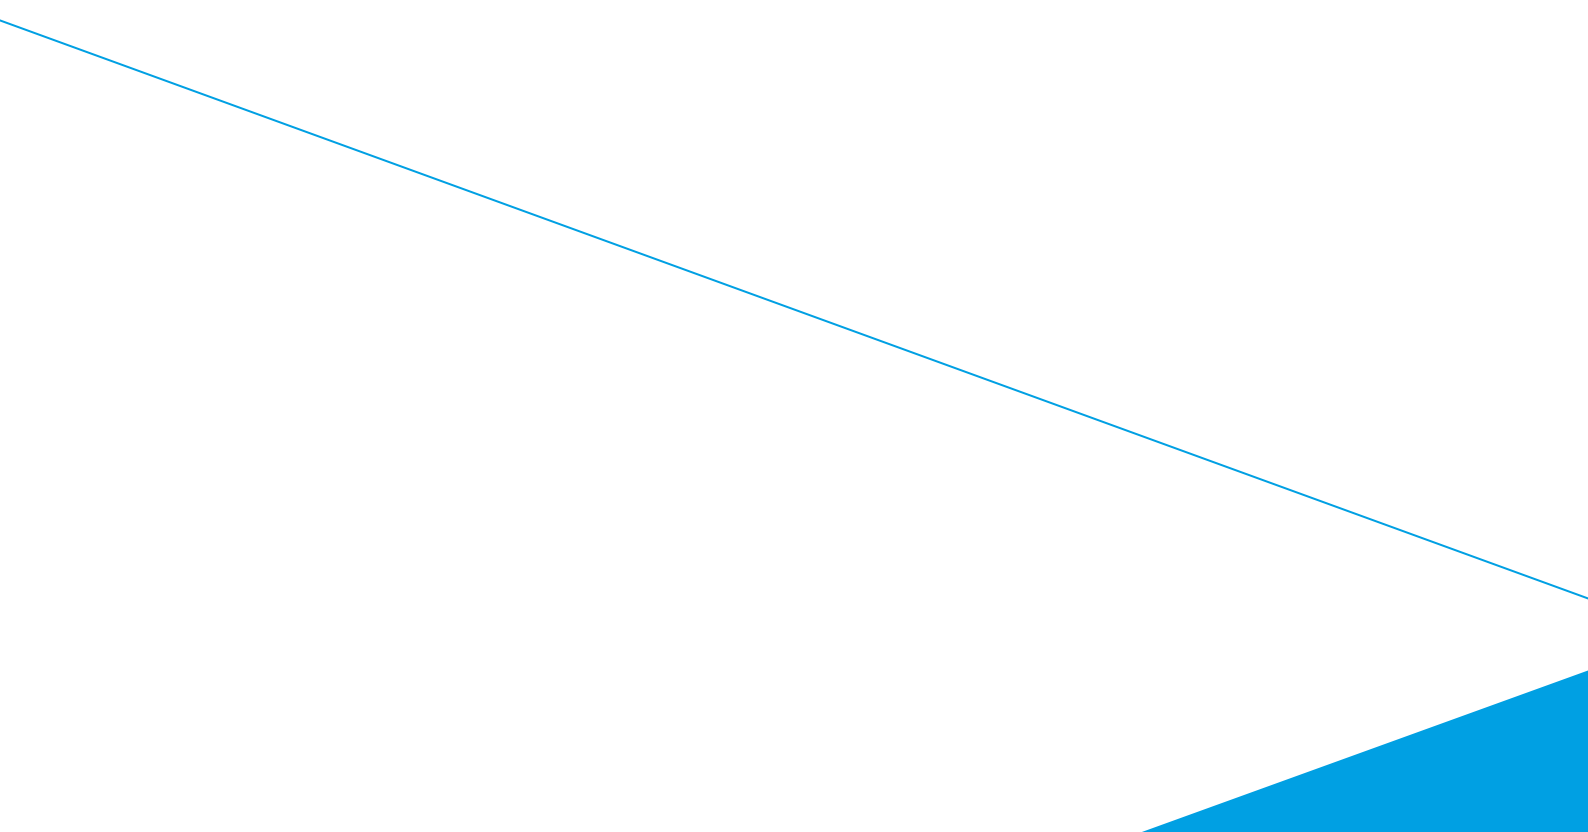

ALPINE SKIING

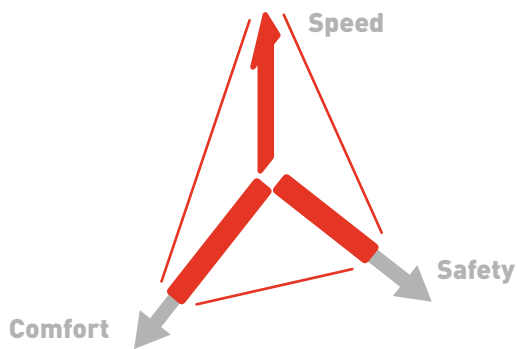

clothing

The Dragonfly alpine skiing apparel is designed based on the successful experience of producing monosuits and the desire for lightweight, stylish, yet warm clothing for skiing and snowboarding, especially freeriding. All materials have been carefully selected according to these desires. top-quality membrane fabric from the TORAY, world's leading manufacturer. SLAYTEX PREMIUM - premium insulation that does not absorb moisture staying light.

The alpine skiing line harmoniously combines sports style with elegance, thus sending a message that it's possible to look trendy and achieve great success on the mountain.

GRAVITY

The best-fitting alpine skiing and snowboarding monosuits. It is light and warm with additional active ventilation, ideal for both freeride in cold, windy conditions and warmer, wet snow conditions. It is equipped with deep functional pockets. The monosuits has maximum protection against ingress of snow, featuring a high collar and a hood that slips over the helmet. Tested by experienced riders. Inspected for environmentally friendly materials according to European standards.

Particular attention to style - elegant, balanced colour combinations. The Kamchatka geographic line features a selection of natural colours similar to those you can see in the Valley of Geysers. The Mono series features monocoloured with a contrasting zip. The Combo line offers the monosuits in combinations of two and more colours.

THERMAL CLOTHING

Winter underwear is an important part of your outfit. Excess moisture must be able to escape from the body in good time. It keeps your body warm and the heat transfer process efficient without overheating or cooling down. To achieve this, Dragonfly thermal underwear uses modern, eco-friendly synthetic materials, whose excellent features include antibacterial properties, body hygiene and a comfortable feel. The thermal underwear is anatomically shaped, does not restrict movement and feels good against the body. Warm thermal underwear is recommended for low mobility or low-temperature skiing.

Compression thermal underwear has the additional function of supporting muscles and increasing their performance and is recommended for high activity or warmer skiing times.

3D THERMO

Thermal underwear Grey

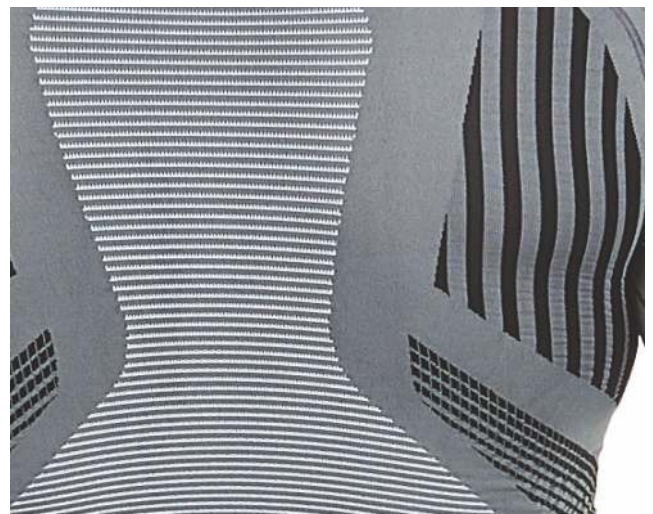

DF 3DTERMO underwear designed with the newest technology effectively ensures dryness and comfort. It is lightweight and perfectly suited for all types of outdoor activities in the temperature range from -20 to +15.

Thanks to a unique combination of innovative technology and materials with a functional design that takes into account the human anatomy, the thermal underwear perfectly fits the body and provides maximum comfort for active sports.

To improve thermoregulation, engineers have developed special moisture removal and air duct systems. The Dehydration system is used in maximum perspiration areas, allowing the athlete to

stay dry even in the most extreme conditions, while the Air condition system ensures a natural air supply to the skin. A clever compression system improves blood circulation and stimulates your muscles, increasing their performance.

The Activeseam™ seam, a special anatomic seam for active sports that was developed and patented in the USA specifically for sportswear, is used. Particular attention was paid to the shape of the thermal underwear, which fully follows the body shape and ensures absolute freedom of movement by 3D design. Each thermal underwear model is tested by professional athletes under the most extreme conditions.

XS/S/M/L/XL/XXL

Used as the second layer.

The thermal insulation in the waist, knees and crotch area is increased.

Combination of two fabrics: breathable windstopper and soft elastic fleece that perfectly dissipates moisture from the thermal underwear to the top layer. Acts as a second layer of insulation.

Technical opening with a long two-locking zip at the top and bottom.

Back zip will be indispensable for special occasions when spending long periods in windy, exposed areas.

Insulated waistcoat

SIZES

S/M/L/XL/XXL

Waistcoat - breathable wind block at the front for wind protection and warmth, fleece-soft fabric at the back that perfectly wicks moisture away from the thermal underwear. It is used as a second layer or as a supplement to a second layer.

Anatomic cut.

Comfortable fit.

Low collar.

Two zippered pockets.

Light and warm.

Indispensable in a wardrobe in spring, autumn and winter

Thermal shorts

SIZES

S/M/L/XL/XXL

The ultimate outfit in a rider's wardrobe. Designed to provide increased insulation in the waist and crotch area. The combination of breathable windstopper and soft elastic fleece provides greater comfort and warmth. These fabrics do not absorb any moisture and perfectly conduct the moisture away from the thermal underwear and towards the top layer. Recommended as a second layer to overall, waders and other cold-weather clothing. Composition: 100% polyester.

Neoprene seat

SIZES

M/L/XL/XXL

The element of protection when riding in cold weather. It provides dryness and warmth in any kind of activity. It is made of high-quality neoprene. The cut is oriented to the "sitting" position. Could be worn both under outerwear and over it. It has adjustable fasteners around the hips and at the waist.

Material: neoprene

Polartec thermal socks

SIZES 33-35 / 36-38 / 39-41 / 42-44 / 45-46

Polartec power stretch material (USA)
Hypo-allergenic and ecological.
Fabric with antibacterial treatment.
The anatomic cut offers a perfect fit and a perfect performance of the fabric.
Colour: black, coloured.

DF 3D Thermo Socks

SIZES S (36-38) / M (39-41) / L (42-44) / XL (45-47)

Composition 95% Polypropylene Dryarn®, 5% Elastane

Zonal breathable honeycomb mesh

High-density weave for better toe protection

Channels for air and moisture transport

Comfortable rubber band

Good moisture transport and thermal management

Temperature resistant from - 20 °C to + 5 °C

3D Thermo balaclava Red

100220-200

Green

100220-700

The elastic undergarment with no side seams and an air duct system that allows the skin to breathe.

The 3D structure provides total comfort and freedom of movement.

Effective thermo-regulation and moisture-wicking functions are bound in a hypoallergenic and environmentally friendly material that prevents the formation of bacteria and the formation of lint.

Composition: 95% Polypropylene Dryarn®, 5% Elastane

Temperature resistant from -20 °C to +15 °C

Balaclava Mountain Proff

100209

An undergarment that protects the face, neck and chest from the cold and wind. Elasticated, warm, with wind protection, insert on face and chest and neoprene nose to vent steam and moisture from breathing down, anatomically cut, perfect fit to head, a bib in windproof fabric.

Composition:	100% polyester
Materials:	Polartec Power Stretch, WindStopper, neoprene

Dragonfly

Teaching children to dress appropriately for the weather is probably the best way to show care. Show them that winter clothes should not only be beautiful but also reliable and practical, then you can be calm about your future grandchildren's health.

We've combined the best of our collections in children's outfits: warm, soft, comfortable, bright and as reliable as possible.

Dragonfly suits and overalls can be worn not only for skiing and winning, but also for running, jumping, crawling, sliding, skiing and snowmobiling with your parents. They are comfortable, practical, not blowing and not getting wet, keeping maximum warmth. You can be sure that your child won't get cold even after a long walk in the fresh air. The modern and clever materials are thermoregulating, they're also waterproof and snow-resistant and have many handy pockets, a colourful design and the coolest look you'll ever see.

RACE COAT

men's winter coat Blue

A winter coat is an indispensable winter companion. You can use it as an insulating garment, during competitions or long journeys, or wear it as a regular sports coat. It can also be customised to match your team style, or you can choose the DF TEAM style.

The coat is made of a robust windproof fabric with a water repellent coating.

It features reflective stripes on the coat and piping on the hood.

The front flap includes magnets for extra wind protection.

Four pockets. Outer deep zipped pockets for hands. Their width and depth will allow you to put your hands in the pocket without taking off your gloves.

Big, insulated hood with a visor and adjustments.

High collar, elastics on the sleeves.

Central double zip, which length allows you to move and sit comfortably.

BAG'S

When camping or travelling in winter, it's vital to keep gear, communication equipment and supplies dry. Thermal bags are the solution for the ultimate protection.

The Dragonfly bag line includes a range of really useful outdoor accessories: spacious bags ranging from 50 to 120 litres, small comfortable bags and backpacks, re-sealable bags and waist packs, phone and tablet cases, and first-aid kits.

Seam bonding

Modern fabrics and technology ensure a high level of thermal regulation. For Dragonfly, we not only choose high-quality materials but also glue the seams together to prevent water and cold air from entering the outfit.

Waterproof zips

We use special waterproof zips for all our equipment. Their use guarantees a perfect seal and 100% protection for the rider.

Membrane fabric

Dragonfly jackets, trousers and overalls are made of the world's leading manufacturers' modern membrane fabrics featuring high performance on such parameters as thermo-regulation, vapour permeability and perspiration. Our gear will keep you comfortable in any weather.

Reflective fabrics

Every piece of clothing should provide maximum protection from any external factors. All Dragonfly garments feature reflective fabrics that blend seamlessly into the overalls outfit. This allows the rider to be seen in the dark from a distance.

Hard-wearing fabrics

A good item quickly becomes a favourite. In the high-load areas (knees, elbows, cuffs) we use three- or five-layer membrane fabrics that maintain the garment's appearance for a long time.

Dragonfly TechLab Design Centre

At **Dragonfly TechLab** we create gear based on several important factors. These include the weather conditions in which it will be used, the opinions of experienced riders who have ridden all over the world, and the most state-of-the-art technology available today.

Durable DFTEX membrane fabric, 3-layer membrane fabric reinforcements in the areas of high stress, elastic inserts and an effective ventilation system - these and many other functional elements ensure maintenance of the right body temperature as well as the mobility required for extreme sports and leisure activities.

The winter outfits are made considering all important points: Teflon water repellent coating on the tops, waterproof zips and extra protection for the seams. The riders' ergonomic cut is compatible with all types of body protection. By researching new materials, optimising construction and reducing product weight, **Dragonfly TechLab** is constantly working to improve the quality of future products.

Dragonfly TechLab is located in Ekaterinburg. We work directly with partners from the Italian studio **Design Odyssey**, with material and fabric manufacturers, as well as directly with customers and riders who have chosen Dragonfly outfits.
